

TLR650001

# BarUp

## Bull Bar Fitting Station

Designed to assist in the workshop with fitment of different sizes and brands of bull bars with hoops, rear bars, fuel tanks, and tow bars, the BarUp range has several attachments to aid in lifting accessories and is used with a hydraulic lift table.

Not just a device to help lift a bull bar onto a vehicle, the BarUp supports a bull bar with a pivoting cradle for the bull bar to be tilted & laid on its back to allow extra accessories to be fitted such as winches and buffers.

The lifting aids mount onto the hydraulic lift table to allow one fitter to move, lift & align the accessories easily. The bars are easily moved and held in alignment allowing for tightening of bolts before moving the lifting aid away.

The TLR Products BarUp range has been designed, trialed & perfected over many years by our own workshop fitters. Improving fitting times but up to 80 hours a year, the BarUp range improves workplace performance and safety.

### Features:

- Allows one person to fit a bull bar
- Easy realignment when installing
- Provides less chance of damaging the bull bar
- Bull bar can be pre-assembled before vehicle arrives
- All parts are zinc plated and powder coated
- Designed & tested to 150kgs (1.5 Safety factor)

### Includes:

- 1 x BarUp – Bull Bar Fitting Station

### Note:

- We recommend one TLR650001 BarUp coupled with Hydraulic Table as it must be fitted onto table.

TLR Products is Australian owned, with all products designed and manufactured in Newcastle, NSW.
